

What will be the output of the PHP code.

```
<?php
$string1 = "Hello";
$string2 = "Batman ";
echo $string1.$string2;
?>
```

Note: Output is enclosed inside double quotes to show where the space can be.

- ☐ "Hello Batman"
- ☐ " HelloBatman"
- ☒ "HelloBatman "

Answer: "HelloBatman "

Explanation: There is a space after Batman in \$string2.

Q. What is the difference between print and echo?

Echo and print are more or less the same. They are both used to output data to the screen. The difference is echo has no return value while print has a return value of 1 so it can be used in expressions. print can just print one variable, while echo can print multiple variables separated by a comma (,) in the syntax.
