Consider $variable1 = "TRUE". What is the datatype of $variable1?

○ **Boolean**

◉ **String**

Answer: **String**

Explanation: TRUE is in double quotes. It indicates it is a string variable.

Q. What is the difference between print and echo?

Echo and print are more or less the same. They are both used to output data to the screen. The difference is echo has no return value while print has a return value of 1 so it can be used in expressions. print can just print one variable, while echo can print multiple variables separated by a comma (,) in the syntax.
