Code Challenge:

Declare two variables - $var1 with value 10 and $var2 with value 12. Perform addition operation on two variables.
The output of the web page should be:
The addition of 10 and 12 is 22.

| Your Code () | Solution () |

```php
1 <?php
2 $var1 = 10;
3 $var2 = 12;
4 $sum =$var1 + $var2;
5 echo "The addition of ".$var1." and ".$var2." is ".$sum.".";
6 ?>
```

Q. What is the difference between print and echo?

Echo and print are more or less the same. They are both used to output data to the screen. The difference is echo has no return value while print has a return value of 1 so it can be used in expressions. print can just print one variable, while echo can print multiple variables separated by a comma (,) in the syntax.

Ask your doubts to the instructor personally if they are not already answered on forum.
